JOSÉ VINÍCIUS LOURENÇO

Database Administrator & Cloud Engineer | Oracle DBA (RMAN & Data Pump), PostgreSQL (AWS RDS), Linux SRE & Terraform

vviniciuslourenco@gmail.com • +55 81 99512-6839 • Recife, Brazil (Available for Hybrid in SP / Global Remote) • linkedin.com/in/jose-vinicius-lourenço • github.com/ViniScooper

PROFESSIONAL SUMMARY

Database Engineer and Infrastructure Reliability Specialist with 5+ years of experience engineering, supporting, and migrating mission-critical enterprise workloads across multi-cloud environments (AWS and OCI). Specialized in relational database ecosystems with extensive hands-on expertise as an **Oracle DBA**: Multitenant architecture (CDB/PDB), advanced Disaster Recovery with **Oracle RMAN** (Point-in-Time Recovery / PITR at PDB level, strict archivelog management, Mount-state recovery simulations, physical block validation via `RESTORE/RECOVER VALIDATE`, and `RESETLOGS` operations), and enterprise data migration with **Oracle Data Pump (expdp/impdp)**. Solid proficiency in **PostgreSQL (AWS RDS / Aurora Multi-AZ)**, orchestrating **heterogeneous database migrations** (Oracle/SQL Server to PostgreSQL using **AWS DMS**, AWS SCT, and CDC pipelines) with minimal downtime and strict ACID compliance. Deep expertise in **Linux SRE (Ubuntu, Oracle Linux, RHEL)**, automated operational workflows via Shell Scripting (Bash) and Python, **Terraform (IaC)** for automated database provisioning, **Flyway** for database schema versioning in **CI/CD pipelines**, and Docker. Fluent in English, experienced collaborating with distributed global engineering teams in daily agile ceremonies.

TECHNICAL SKILLS

Oracle DBA & Resilience:	**Oracle Database (19c/21c/ATP/23ai)**, Multitenant Architecture (CDB/PDB), **Oracle RMAN (Point-in-Time Recovery - PITR, Archivelogs, RESTORE/RECOVER VALIDATE, RESETLOGS)**, **Oracle Data Pump (expdp/impdp - REMAP_SCHEMA, compression, parallelism)**, AWR/ASH/ADDM Profiling, Data Guard, Performance Tuning
PostgreSQL & Cloud Data:	**PostgreSQL (AWS RDS / Aurora Multi-AZ)**, Performance Tuning (`EXPLAIN ANALYZE`, `pg_stat_statements`), Autovacuum Optimization, Lock & Deadlock Troubleshooting, PgBouncer, Read Replicas, Microsoft SQL Server, MongoDB Architecture, MySQL
Migrations & CDC:	**Heterogeneous Database Migrations (Oracle/SQL Server → PostgreSQL)**, AWS DMS (Database Migration Service), AWS SCT, Change Data Capture (CDC), Debezium, Full Load & Ongoing Replication
Linux SRE & Automation:	**Advanced Linux Administration (Ubuntu, Oracle Linux, RHEL)**, **Shell Scripting (Bash)**, Automated DBA Operational Workflows, Process Management, OS Diagnostics (I/O, Memory, Swap), Docker Containerization
IaC, CI/CD & Cloud:	**Terraform (IaC for RDS, VPC & Cloud Resources)**, **Flyway (Schema Versioning as Code)**, GitHub Actions CI/CD, AWS (RDS, EC2, S3, CloudWatch), Oracle Cloud (OCI), Python, REST APIs, GitFlow, Scrum / Agile

PROFESSIONAL EXPERIENCE

Mid-Level Database Administrator (DBA Pleno) — In Forma Software **Jul 2024 – Present | Recife, Brazil**

- Administer enterprise mission-critical OLTP production databases (Oracle Database 19c/21c, Multitenant CDB/PDB, and Data Guard), sustaining 99.98% uptime SLA.
- Architect and execute Disaster Recovery procedures with **Oracle RMAN**: automated transactional backup policies (Full, Incremental, Archivelogs), Mount-state recovery simulations, physical block integrity audits (`RESTORE DATABASE VALIDATE`, `RECOVER DATABASE TEST`), and **Point-in-Time Recovery (PITR)** with `RESETLOGS` PDB re-openings.
- Plan and execute enterprise-scale database migrations, schema transfers, and data movement using **Oracle Data Pump (expdp/impdp)**, leveraging schema remapping (`REMAP_SCHEMA`), tablespace reallocation, dump file compression, and multithreaded parallelism to minimize maintenance windows.
- Manage and troubleshoot high-availability **Linux environments (Ubuntu, Oracle Linux, RHEL)**, creating robust operational automation with **Shell Scripting (Bash)** and Python (smart CLI wrappers, automated instance health checks, and backup cron jobs), reducing manual intervention by over 50%.
- Conduct advanced Performance Tuning: deep profiling via AWR, ADDM, and ASH reports, Execution Plan analysis, index defragmentation/rebuilds, lock contention elimination, and I/O latency reduction on critical queries.
- Enforce data governance, RBAC security access auditing, storage/tablespace management, proactive health metrics tracking, and L3 incident troubleshooting.

Software Developer & Database Engineer — Cod.ERP Tecnologia LTDA **May 2023 – May 2024 | Recife, Brazil**

- Developed and modernized cloud database infrastructure for enterprise multi-tenant ERP platforms, focusing on **PostgreSQL on AWS (RDS Multi-AZ)** and SQL Server.
- Planned and executed **heterogeneous database migrations** (SQL Server/Oracle to PostgreSQL on AWS) incorporating data type mappings, schema refactoring, and continuous replication via **AWS DMS (Database Migration Service) and CDC**.
- Administered and conducted **performance tuning in PostgreSQL**: profiling queries with `EXPLAIN ANALYZE`, diagnosing top queries via `pg_stat_statements`, fine-tuning **autovacuum** to prevent table bloat, connection pooling (PgBouncer), and resolving concurrent locks.
- Implemented Infrastructure as Code (**IaC with Terraform**) for automated provisioning of RDS PostgreSQL instances, DB subnet groups, parameter groups, and security groups.
- Managed database schema versioning and deployment automation with **Flyway integrated into CI/CD pipelines** (GitHub Actions), ensuring zero-downtime releases and strict DDL/DML environment consistency.
- Built and optimized complex SQL queries, stored procedures, triggers, and integration microservices in Python.

Software Development Intern — KarneKeijo Logística **Jan 2022 – Mar 2023 | Recife, Brazil**

- Developed transactional routines and data integrations connecting enterprise ERP systems and relational databases within a high-throughput logistics facility.
- Validated transactional consistency and designed optimized relational schemas for operational reporting.

TECHNICAL PROJECTS & HIGHLIGHTS

CloudOps Hub — Multi-Cloud Management & SRE Automation Platform **Terraform, AWS, Docker, Fastify, React, PostgreSQL/Oracle ATP**

- Engineered cloud infrastructure control architecture (AWS EC2/RDS and OCI) with agentless SSH2 orchestration, live telemetry streaming, and automated self-healing triggers under 50 MB host RAM footprint.
- Implemented declarative database provisioning via **Terraform** and automated continuous schema evolution via **Flyway**.

ByteData — Enterprise Data Migration & Integration Microservice **Python, PostgreSQL (AWS RDS), Docker, REST APIs**

- Developed high-throughput ingestion and transformation microservice processing heterogeneous enterprise REST payloads and persisting into **PostgreSQL** with strict ACID transactional guarantees.

EDUCATION, CERTIFICATIONS & LANGUAGES

Postgraduate Degree in Cloud Computing Projects — Faculdade Descomplica Digital *(In Progress)*

Associate Degree in Systems Analysis & Development — Faculdade Descomplica Digital *(Completed)*

Associate Degree in Systems Analysis & Development — UNINASSAU *(Completed)*

Certifications & Training: AWS Cloud & Architecture Fundamentals • Google IT Support Professional • Oracle Cloud Infrastructure Foundations

Languages: English (Advanced / Full Professional Proficiency) — Conducts and leads daily technical meetings with global teams • Portuguese (Native)
