PROFESSIONAL SUMMARY

Software Developer and Database Engineer with 5+ years of experience engineering, supporting, and migrating mission-critical enterprise workloads across multi-cloud environments (AWS and OCI). Specialized in relational database ecosystems with extensive hands-on expertise in **PostgreSQL (AWS RDS / Aurora Multi-AZ)** and Oracle. Proven track record in orchestrating **heterogeneous database migrations** (Oracle/SQL Server to PostgreSQL using **AWS DMS**, AWS SCT, and CDC pipelines) with minimal downtime and guaranteed ACID compliance. Deep expertise in PostgreSQL administration, troubleshooting, and **performance tuning** (profiling via `EXPLAIN ANALYZE` and `pg_stat_statements`, fine-tuning **autovacuum** parameters, resolving deadlocks/locks, connection pooling with PgBouncer, and Read Replicas). Skilled in modern DevOps practices, including **Terraform (IaC)** for automated database provisioning, **Flyway** for database schema versioning within **CI/CD pipelines**, Python microservices, and Docker on Linux. Fluent in English, experienced collaborating with distributed global engineering teams in daily agile ceremonies.

TECHNICAL SKILLS

Databases:	PostgreSQL (AWS RDS / Aurora Multi-AZ) , Oracle Database (19c/21c/ATP), Microsoft SQL Server, MongoDB Architecture, MySQL
Migrations & CDC:	Heterogeneous Database Migrations (Oracle/SQL Server → PostgreSQL) , AWS DMS (Database Migration Service), AWS SCT, Change Data Capture (CDC), Debezium, Full Load & Ongoing Replication
PostgreSQL Tuning & SRE:	Performance Tuning (EXPLAIN ANALYZE, pg_stat_statements) , Autovacuum Optimization, Lock & Deadlock Troubleshooting (<code>pg_locks</code> , <code>pg_stat_activity</code>), Advanced Indexing (B-Tree, GIN, Partial), PgBouncer, Read Replicas, Disaster Recovery (RPO/RTO)
IaC, CI/CD & Cloud:	Terraform (IaC for RDS, VPC, Subnets & Parameter Groups) , Flyway (Schema Versioning as Code) , GitHub Actions CI/CD, AWS (RDS, EC2, S3, CloudWatch), Oracle Cloud (OCI), Docker, Linux (Ubuntu/RHEL)
Development & Tools:	Python, Advanced SQL / PL-pgSQL, Shell Scripting (Bash), REST APIs, Data Observability, GitFlow, Scrum / Agile

PROFESSIONAL EXPERIENCE

Software Developer & Database Engineer — In Forma Software

Jul 2024 – Present | Recife, Brazil

- Architect and sustain mission-critical enterprise OLTP databases in high-concurrency production environments, maintaining 99.98% uptime SLA across **PostgreSQL on AWS (RDS Multi-AZ)** and Oracle.
- Planned and executed **heterogeneous database migrations** (Oracle to PostgreSQL on AWS) incorporating data type mappings, schema refactoring, and continuous CDC replication (AWS DMS) with near-zero downtime.
- Spearheaded **PostgreSQL performance tuning**: analyzed complex query execution plans (`EXPLAIN ANALYZE`), optimized slow queries identified via `pg_stat_statements`, fine-tuned **autovacuum** scale factors to prevent table bloat, and eliminated transaction locking bottlenecks.
- Implemented **Infrastructure as Code (IaC) with Terraform** to declaratively provision and manage RDS PostgreSQL instances, DB subnet groups, custom parameter groups, and security group ingress rules.
- Integrated **Flyway into automated CI/CD pipelines** (GitHub Actions), enforcing version-controlled database migrations (DDL/DML), automated pre-deployment testing, and seamless schema deployments across environments.
- Developed operational automation tooling and health-check monitors in Python and Bash, reducing manual intervention by over 50%.

Database Administrator & Data Analyst — Cod.ERP Tecnologia LTDA

May 2023 – May 2024 | Recife, Brazil

- Administered high-volume relational production databases supporting multi-tenant enterprise ERP systems.
- Authored and optimized complex SQL queries, partitioned indexes, and stored procedures, mitigating CPU and I/O wait states during peak transaction windows.
- Supervised transactional and differential backup strategies, Disaster Recovery rehearsals, referential integrity checks, and provided L3 technical incident response.

Software Development Intern — KarneKeijo Logística

Jan 2022 – Mar 2023 | Recife, Brazil

- Developed transactional routines and integrated data streams with ERP backbones and relational databases for large-scale enterprise logistics.
- Ensured relational consistency across internal tables and optimized operational reporting queries.

TECHNICAL PROJECTS & HIGHLIGHTS

CloudOps Hub — Multi-Cloud Control Plane & SRE Automation Engine

Terraform, AWS, Docker, Fastify, React, PostgreSQL/Oracle ATP

- Engineered a cloud management console (AWS EC2/RDS and OCI) with zero-agent SSH2 orchestration, real-time telemetry streaming, and automated self-healing with under 50 MB host RAM overhead.
- Employed **Terraform** for repeatable database provisioning and automated schema evolution via **Flyway**.

ByteData — Enterprise Data Integration & Migration Microservice

Python, PostgreSQL (AWS RDS), Docker, REST APIs

- Built an asynchronous data ingestion microservice consuming external REST APIs and persisting into **PostgreSQL** under strict ACID guarantees.

EDUCATION, CERTIFICATIONS & LANGUAGES

Postgraduate Specialization in Cloud Computing Projects — Faculdade Descomplica Digital (*In Progress*)

Associate Degree in Systems Analysis and Development — Faculdade Descomplica Digital (*Graduated*)

Associate Degree in Systems Analysis and Development — UNINASSAU (*Graduated*)

Certifications: AWS Cloud & Architecture Fundamentals • Google IT Support Professional • Oracle Cloud Infrastructure Foundations

Languages: English (Advanced / Professional Working Proficiency) — Qualified to lead and collaborate in daily global engineering meetings • Portuguese (Native)
